Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies, ¹ and then making the scanned versions text-searchable. ² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Prepared for the Federal Open Market Committee

By the staff Board of Governors of the Federal Reserve System

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Recent developments

March growth rates are in the lower half of the Committee's operating ranges. M₁ expanded at an annual rate a little below 1 per cent in February. Growth is expected to pick up in March and expansion for the 2 months combined is projected at about a 3½ per cent rate. Growth of M₂ has been affected by a sharp deceleration of flows into savings deposits, and for February-March it appears to be running at about a 7½ per cent rate. At thrift institutions, there was also an appreciable slackening of deposit inflows during February-the latest period for which data are available. Nonborrowed reserves fell in February and are projected to decline in March, reflecting the weakness in member bank deposits that had developed in January and persisted through the end of February. 1/

Growth in Monetary Aggregates over February-March period (SAAR in per cent)

	Ranges	Latest Estimates
M ₁	3 to 7	3.6
M_2	6½ to 10½	7.3
Memorandum: Federal funds rate		Avg, for statement week ending
(per cent per annum)		Feb. 16 4.70 23 4.74
		Mar. 2 4.68 9 4.63

^{1/} The recent behavior of nonborrowed reserves is compared with estimates of 6-month growth rates in nonborrowed reserves and related measures believed consistent with longer-run growth ranges for the aggregates in appendix I.

- (2) In the weeks immediately following the February FOMC meeting, incoming data suggested that February-March growth rates in both M₁ and M₂ would be close to the midpoints of their respective ranges. Consequently, the Desk continued to aim for a Federal funds rate in the area of 4-5/8--4½ per cent. When subsequent information indicated that both aggregates were expanding at rates in the lower halves of their ranges, the Desk shaded its funds rate objective toward 4-5/8 per cent.
- (3) Short-term interest rates changed little on balance over the inter-meeting period, but long-term rates rose 10 to 15 basis points. The modest rise in long rates apparently reflected the effects on market expectations of strengthening economic news. Yields in secondary mortgage markets rose in sympathy with bond rates, but rates on primary mortgages were virtually unchanged.
- (4) With yields in long-term markets up after the turn of the year, offerings of new corporate bonds fell substantially in February. Partly in consequence, business demands for short-term credit expanded rapidly. Bond offerings by State and local governments were maintained at a very rapid pace in February, and during the inter-meeting period the Treasury raised about \$4.1 billion through new issues of 2- and 4-year notes.
- (5) The table on the following page shows (in terms of percentage annual rates of change) related monetary and financial flows over various time periods.

	1975 & 1976 Average	Past Twelve Months Feb. '77 over Feb. '76	Past Six Months Feb. '77 over Aug. '76	Past Three Months Feb. '77 over Nov. '76	Past Month Feb. '77 over Jan. '77

^{2/} Based on month-end figures. Includes loans sold to affiliates and branches. NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper, and thrift institutions--which are derived from either end-of-month or last Wednesday-of-month figures. Growth rates for reserve measures in this and subsequent tables are adjusted to remove the effect of discontinuities from breaks in the series when reserve requirements are changed.

Prospective developments

(6) Short-run specifications for the monetary aggregates and the Federal funds rate are summarized below, with more detailed short-run and longer-run figures shown in the tables on pp. 5 and 6.

	Alt. A	Alt. B	Alt. C
Ranges for March-April			
M ₁	5월-9월	5-9	4½-8½
M ₂	7½-11½	7-11	6½-10½
Federal funds rate (inter-meeting period)	3-4-4-2	41-5	4월 - 5월

- (7) Assuming the Federal funds rate remains around 4-5/8 per cent--the midpoint of the alternative B range--we expect M₁ growth in the March-April period to accelerate and be at an annual rate in a 5 to 9 per cent range. This pick-up in monetary growth is expected in view of the strengthening in economic activity that appears to be in process. Tax rebates are not likely to be disbursed until May, and thus will not directly influence monetary growth rates in March and April. The rebates will have a substantial effect on growth in money in the following months; alternative projections of their impact on M₁ and M₂ over the spring and summer will be shown in next month's blue book. At the moment the staff is tentatively estimating that the rebates will raise the second-quarter growth rate in M₁ (relative to what it otherwise would be) by about 2 percentage points, and lower the third-quarter rate by about the same amount. (Such estimated impacts are included in the tables on pages 5 and 6.)
- (8) Growth in time deposits other than large CD's is expected to continue at about the recent reduced pace. The rise in yields on

intermediate-term Treasury issues has increased the attractiveness of market instruments relative to time deposits, especially in view of earlier rate-cutting by some commercial banks. Growth in M₂ over the March-April period under current money market conditions is expected to move up in a 7-11 per cent annual rate range, however, because of the strengthening anticipated in M₁ growth.

- (9) Credit demands over the next few weeks are likely to be sizable. The forward calendars suggest that new corporate bond offerings in March will be substantially above the reduced February pace and that municipal bond offerings will continue large. In addition, the Treasury is expected to raise about \$6 to 9 billion in new cash between now and the mid-April tax date, although over half of these funds will probably be raised through short-term cash management bills. Business loan demands at banks are expected to remain moderately strong, but the net increase in loans outstanding may be held down in the next few weeks as proceeds of capital market financing are used to pay off earlier bank loans associated with advance refundings.
- credit demands are likely to be financed with only slight, if any, upward pressure on other interest rates over the next few weeks. Stronger upward rate pressures might emerge if favorable economic news and sharply rising money supply figures turned bond market participants bearish. Over the longer run, in any event, the staff expects that interest rates, particularly short-term rates, would have to rise significantly further if growth in the monetary aggregates over the QIV '76-QIV '77 period is

to be kept within the ranges adopted by the Committee. Appendix tables II and III show longer-run projections for the Federal funds rate and the velocity of money under each of the three alternatives.

- (11) Alternatives A and C contemplate an easing and tightening of the money market, respectively. A decline in the funds rate to the midpoint of the 3½ to 4½ per cent alternative A range could be accompanied by relatively modest reductions in other interest rates, if market participants were to view such a decline as temporary in light of the recent indications of strengthening economic activity. Rate declines would be most pronounced in the very short-term area. A rise in the funds rate, as under alternative C, could be accompanied by fairly substantial upward adjustments in short-term rates—of about 50 basis points or so. Increases in intermediate— and longer-term rates might be more modest, in view of rate increases that have already occurred in that area and the current relatively light dealer positions.
- (12) The decline in the funds rate under alternative A would probably have to be reversed shortly if the Committee is to attain growth rates in the aggregates within its longer-run ranges. The easing of the money market would generate more rapid growth in the aggregates over the next few months than under alternative B, and higher interest rates would be required later in the year to restrain growth. The tightening of the money market under alternative C would introduce monetary restraint earlier in the year and hence would require less of a rise in interest rates by year-end than either alternative A or B.

Directive language

paragraphs of the directive. The first formulation, like the directive adopted at the last meeting, places main emphasis on near-term rates of growth in monetary aggregates; it shows--in strike-through form--the specifications adopted at the last meeting. The second formulation places main emphasis on money market conditions. As suggested below, the particular language needed in the opening lines would depend on the specific conditions sought; the three alternatives shown--calling, respectively, for somewhat easier, prevailing, and somewhat firmer money market conditions--are intended to be associated with the specifications discussed in the preceding section under alternatives A, B, and C.

"Monetary Aggregates" formulation

The Committee seeks to encourage near-term rates of growth in M₁ and M₂ on a path believed to be reasonably consistent with the longer-run ranges for monetary aggregates cited in the preceding paragraph. Specifically, at present, it expects the annual growth rates over the February-March MARCH-APRIL period to be within the ranges of 3-te-7 _____ to ____ per cent for M₁ and 6½-te-10½ ____ to ___ per cent for M₂. In the judgment of the Committee such growth rates are likely to be associated with a weekly average Federal funds rate of about 4-5/8-te-4½ ____ to ___ per cent. If, giving approximately equal weight to M₁ and M₂, it appears that growth rates over the 2-month period will deviate significantly

from the midpoints of the indicated ranges, the operational objective for the Federal funds rate shall be modified in an orderly fashion within a range of ____ to ___ per cent.

If it appears during the period before the next meeting that the operating constraints specified above are proving to be significantly inconsistent, the Manager is promptly to notify the Chairman who will then decide whether the situation calls for supplementary instructions from the Committee.

"Money Market" formulation

At this time, the Committee seeks to maintain about the prevailing money market conditions (or to achieve somewhat easier or somewhat firmer money market conditions) during the period immediately ahead, provided that monetary aggregates appear to be growing at approximately the rates currently expected, which are believed to be on a path reasonably consistent with the longer-run ranges for monetary aggregates cited in the preceding paragraph. Specifically, the Committee seeks to maintain the weekly average Federal funds rate at about _____ per cent, so long as M₁ and M₂ appear to be growing over the March-April period at annual rates within ranges of ____ to ___ per cent and ____ to ___ per cent, respectively. If, giving approximately equal weight to M₁ and M₂, it appears that growth rates over the 2-month period are approaching or moving beyond the limits of the indicated ranges, the operational objective for the weekly average Federal funds rate shall be modified in an orderly fashion within a range of ____ to ___ per cent.

If it appears during the period before the next meeting that the operating constraints specified above are proving to be significantly inconsistent, the Manager is promptly to notify the Chairman who will then decide whether the situation calls for supplementary instructions from the Committee.

Appendix I

Expansion in Reserves Over the Period From QIV '76 to QII '77 Consistent With Proposed Alternatives (Seas. adj. annual rates)

	Alt. A	Alt. B	Alt. C
Nonborrowed Reserves	4.1	3.6	2.9
Total Reserves	4.4	4.2	4.1
Monetary Base	7.5	7.5	7.4

Growth in both nonborrowed and total reserves from the fourth quarter of 1976 to the first quarter of this year is estimated at about a 2.5 per cent annual rate, below the longer-run growth rates for reserve aggregates shown in the table above. Over the same period, the monetary base grew at a 7.0 per cent annual rate, near the longer-run growth rate expected for this measure. Reserves are expected to grow more rapidly in the second quarter. In that period, required reserves will increase sharply because of a temporary increase in the public's holdings of reservable deposits resulting from the proposed tax rebates and social security payments.

NOTE: Government security dealer trading positions are on a commitment basis. Trading positions, which exclude Treasury securities financed by repurchase agreements maturing in 16 days or more, are indicators of dealer holdings available for sale over the near-term. Underwriting syndicate positions consist of issues still in syndicate, excluding trading positions. The basic reserve deficit is excess reserves less borrowing at Federal Reserve less net Federal funds purchases. Weekly data are daily averages for statement weeks, except for corporate and municipal issues in syndicate which are Friday figures.

^{*} STRICTLY CONFIDENTIAL

^{**} Monthly averages for excess reserve and borrowings are weighted averages of statement week figures.

NOTE: Weekly data for columns 1 to 4 are statement week averages of daily data. Columns 5 and 6 are 1-day Wednesday quotes (prior to 1976, figures shown are for 60-89 day and 90-119 day ranges, respectively). For columns 7 through 10, the weekly date is the mid-point of the calendar week over which data are averaged. Columns 11 and 12 are 1-day quotes for Friday and Thursday, respectively, following the end of the statement week. Column 13 is an average of contract interest rates on commitments for conventional first mortgages with 80 per cent loan-to-value ratios made by a sample of insured savings and loan associations on the Friday following the end of the statement week. Column 14 gives FNMA auction data for Monday preceding the end of the statement week. The FNMA auction yield is the average yield in bi-weekly auction for the term forward commitments for Government underwritten mortgages. GNMA yields are average net yields to investors on mortgage-backed securities for immediate delivery, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the coupon rate 50 basis points below the current FHA/VA ceiling.
