Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies, ¹ and then making the scanned versions text-searchable. ² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Prepared for the Federal Open Market Committee

By the staff Board of Governors of the Federal Reserve System

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Recent Developments

(1) Over the July-August period, M₁ appears to be expanding at an annual rate of about 6 per cent--the mid-point of the Committee's operating range. Growth of M₂ over the same period is now projected at around a 10½ per cent annual rate, somewhat above the mid-point of its range. Expansion of the time deposit component of M₂ in July was somewhat more rapid than anticipated, reflecting a resumption of savings deposit growth as short-term market interest rates declined. Deposit inflows to nonbank thrift institutions also increased sharply during the month. Non-borrowed reserves appear to be increasing at only about a 2½ per cent annual rate over the July-August period, as a decline in the outstanding volume of money market CD's of banks released reserves to support other deposits.

Growth in Monetary Aggregates over July-August Period (SAAR in per cent)

	Ranges	Latest Estimates	
M ₁	4 to 8	5.9	
^M 2	7½ to 11½	10.4	
Memo: Federal funds rate		Avg. for statement week ending	_
(per cent per annum)		July 21 5.30 28 5.28	
		Aug. 4 5.36 11 5.25	

- (2) Given growth in M₁ and M₂ close to the mid-points of the FOMC's short-run ranges, the Desk has continued to aim at a Federal funds rate of around 5½ per cent. With earlier market concern about a near-term tightening in monetary policy allayed by the stability of the funds rate--as well as by moderate growth in the monetary aggregates and incoming economic data that seemed to indicate less than anticipated strength in the economy--short-term market interest rates declined another 10 to 20 basis points during the intermeeting period. The prime rate at major banks was reduced ½ percentage point to 7 per cent in early August.
- (3) Long-term credit markets have also been influenced by a more optimistic assessment of the interest rate outlook. Corporate and municipal bond yields have fallen 15 to 20 basis points since the July Committee meeting, although this partly reflects a moderation in the volume of new offerings coming to market during the period and in immediate prospect. Mortgage rates have changed little over the intermeeting period.
- (4) The Treasury successfully marketed a substantial volume of longer-term debt in connection with its mid-August refunding. To redeem \$4.5 billion of maturing obligations held by the public and to raise new cash, the Treasury sold \$10.6 billion of new securities. The refunding package included \$2 billion of 3-year notes, \$7.6 billion of 10-year notes (increased from \$4 billion when subscriptions for the

issue totaled \$24,4 billion), and \$1 billion of 25-year bonds. While dealers were awarded most of the new bond, they received only minimal allotments of the 10-year note. In when-issued trading, however, they have taken a large volume of 10-year securities into their positions. Total dealer positions in Treasury coupon issues are large, but dealers thus far appear to be willing holders as all three new issues are selling at sizable premiums over their issue prices and there is a very sizable positive carry on the longer-term issues.

(5) The table on the following page shows (in terms of percentage annual rates of change) related monetary and financial flows over various time periods.

	Calendar Year	Past Twelve Months	Past Six Months	Past Three Months	Past Month
	1975	July '76 over July '75	July '76 over Jan. '76	July '76 over April'76	July '76 over June '76

^{1/} Other than interbank and U.S. Government. 2/ Based on month-end figures. Includes loans sold to affiliates and branches. NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper, and thrift institutions--which are derived from either end-of-month or last Wednesday-of-month figures. Growth rates for reserve measures in this and subsequent tables are adjusted to remove the effect of discontinuities from breaks in the series when reserve requirements are changed.

Prospective developments

(6) Summarized below for Committee consideration are three alternative short-run specifications for the monetary aggregates and the Federal funds rate.

	Alt. A	Alt. B	Alt. C
Ranges for August-Sept. 1/			
M ₁	4½-8½	4-8	3½-7½
^M 2	8-12	72-112	7-11
Federal funds rate (intermeeting period)	4½-5½	4≹-5≹	5눝-6눝

- (7) Longer-run projections of levels and growth rates are shown in the tables on pp. 5a and 5b. Under all three alternatives, the monetary growth rates shown for the QII '76-QII '77 period are around the mid-points of the longer-run ranges adopted by the Committee at its last meeting.

 Expected behavior of the funds rate between now and mid-1977 under these assumptions is shown in Appendix Table II.
- (8) Over the longer-run, the three alternatives would differ in the distribution of monetary ease or restraint--whether measured by monetary growth rates or interest rate levels--between the second half of 1976 and the first half of 1977. Alternative A--which involves an easing of the money market over the next few weeks--encompasses more monetary ease in the second half of this year than the other two alternatives, and more monetary restraint in the first half of next year. At the other end of the spectrum, alternative C--which assumes a tightening of the

^{1/} Nonborrowed reserves and other reserve aggregates thought to be consistent with these ranges are shown in Appendix table I.

money market between now and the next Committee meeting--focuses monetary restraint more in the second half of this year. Alternative B lies in between. The differences among the alternatives, as indexed by growth rates for M_1 and the average level of the funds rate, are summarized in the table below:

	Alt. A	Alt. B	Alt. C
M, growth			
2nd half '76	5毫	5孝	5≵
lst half '77	5월	5≹	6
Average level of funds rate			
2nd half '76	5-3/8	5½	6-1/8
lst half '77	71	6-7/8	6월

- (9) The intermeeting range for the Federal funds rate under alternative B is centered on 5½ per cent, the rate recently prevailing. Given the projected increase in nominal GNP at about an 11 per cent annual rate on average over the next few quarters, the staff still expects that interest rates will begin rising fairly soon if longer-run M₁ growth is held to around a 5½ per cent annual rate. By the second quarter of 1977, we would expect the funds rate to average around 7½ per cent.
- (10) Under alternative B, M₁ is expected to expand in a 4-8 per cent, annual rate, range over the August-September period and M₂ in a 7½-11½ per cent range. M₁ is expected to increase somewhat more rapidly in September than in August, in part because of a sharp drop in Treasury balances. These balances have built up substantially in August, reflecting the unexpectedly large amount of net new money raised in the recent Treasury financing operation.

- (11) M₂ growth is likely to be sustained by sizable inflows of time and savings deposits other than money market CD's, given continued stability in the funds rate and little change in other short-term rates. The rate of increase in such time deposits may be more rapid in September than in August, when expansion apparently is being restrained by the diversion of funds to purchase the Treasury's new 8 per cent, 10-year note. Over the longer run, the prospective rise in interest rates would likely dampen savings and time deposit flows. It appears likely that, by the spring of 1977, Regulation Q ceilings would need to be increased in order to maintain M₂ and M₃ growth rates near the mid-points of their respective longer-run ranges.
- modest over the next few weeks. In the August-September period, the average monthly volume of new issues may amount to only about \$1-1/2 billion for publicly offered corporate bonds, and about \$2 billion for state and local government issues—down from average monthly volumes of about \$2-1/2 billion and just under \$3 billion, respectively, in the first half of the year. There are signs of some pick-up in short-term business credit demands, but these demands remain relatively light. However, there is a very large inventory of U.S. Government securities in dealer hands that has not yet been distributed to ultimate holders. Dealers hold \$9 billion in U.S. Government and Federal agency issues, including \$1-1/4 billion of the new 10- and 25-year Treasury issues.

- (13) Alternative C involves a tighter monetary policy over the next few weeks and assumes that the Federal funds rate rises to the midpoint of a 5-1/4 to 6-1/4 per cent range. Such an increase would be likely to spark substantial efforts by Government dealers to unload their positions, and would therefore probably lead to considerable short-run upward adjustment in yields on Treasury securities. The 3-month bill rate might rise 40 to 60 basis points to the 5-1/2 to 5-3/4 per cent area, and Treasury note and bond yields could increase 20 to 30 basis points.
- (14) While alternative C involves more near-term restraint than B, the early move toward tightening would work to limit interest rate increases needed over the longer run to maintain M₁ growth over the QII '76-QII '77 period at around 5-3/4 per cent. The staff believes that the funds rate could peak out at around 6-3/4 per cent during the fall under an alternative C approach. At such a rate level, it appears that an upward adjustment in Regulation Q may not be needed to enable the Committee to attain its longer-run M₂ and M₃ objectives.
- (15) Alternative A assumes an easing of money market conditions between now and the next meeting--with the funds rate dropping to the mid-point of a 4-1/4 to 5-1/4 per cent range. Given the outlook for GNP, such a near-term easing would probably need to be reversed shortly in order to attain a 5-3/4 per cent growth in M₁ from QII '76 to QII '77. If the reversal were begun in early fall, the funds rate might peak out at around 7-1/2 per cent by the second quarter of 1977, a somewhat higher rate than

under alternative B. An upward adjustment in Regulation Q ceiling rates might be required somewhat earlier than under B, perhaps in the winter of next year.

(16) Market reactions to an easing of money market conditions over the next few weeks are difficult to evaluate. Downward yield adjustments may be limited by expectations that such an easing is likely to be reversed soon. On the other hand, if economic news also continues to be suggestive of a pause in activity, an easing of the money market could be accompanied by fairly substantial rate declines in short- and long-term markets. The 3-month bill rate, for example, might well return to around 4-3/4 per cent, its earlier low for the year. At such a rate, savings inflows to banks and thrift institutions would probably become even larger. This would exert pressure on these institutions to seek higher yielding longer-term investments, and thus would place downward pressure on bond yields and also on mortgage rates. However, some institutions -- fearful of being locked into longer-term securities should there be a reversal of interest rates and a strengthening of credit demands -- might elect to reduce time and savings deposit rates, or at least to cut back their advertising for deposits.

Proposed directive

(17) Given below is a proposed operational paragraph for the directive if the Committee wishes to continue formulating its instructions in terms of desired growth in monetary aggregates over the months ahead. No alternatives are presented for this formulation, in the expectation that the reference to desired growth will be taken to apply to the Longer-term targets and that at this meeting the Committee will not consider those targets.

"Monetary Aggregates" Proposal

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve bank reserve and money market conditions consistent with moderate growth in monetary aggregates over the period ahead.

(18) Should the Committee desire to place main emphasis on bank reserve and money market conditions, the language needed would depend on the specific conditions sought. Three alternative "money market" directives intended to correspond to the similarly lettered policy alternatives are given below.

Alternative "Money Market" Proposals

Alternative A

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve SOMEWHAT EASIER bank reserve and money market conditions consistent-with-moderate-growth-in-monetary-aggregates over the

period IMMEDIATELY ahead, PROVIDED THAT MONETARY AGGREGATES APPEAR TO BE GROWING AT ABOUT THE RATES CURRENTLY EXPECTED.

Alternative B

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve MAINTAIN PREVAILING bank reserve and money market conditions consistent-with-moderate-growth-in-monetary-aggregates over the period IMMEDIATELY ahead, PROVIDED THAT MONETARY AGGREGATES APPEAR TO BE GROWING AT ABOUT THE RATES CURRENTLY EXPECTED.

Alternative C

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve SOMEWHAT FIRMER bank reserve and money market conditions consistent-with-moderate-growth-in-monetary-aggregates over the period IMMEDIATELY ahead, PROVIDED THAT MONETARY AGGREGATES APPEAR TO BE GROWING AT ABOUT THE RATES CURRENTLY EXPECTED.

Appendix A Comparison of Actual and Targeted Reserves

The table below compares the actual average level of reserves for the four-week period ending August 18 with the "targeted" level that had been thought consistent with the mid-points of the short-run ranges for the monetary aggregates adopted at the last FOMC meeting.

			Actual1/	Targeted	Differences
1.	(2+3)	Nonborrowed reserves	34,371	34,326	45
2.		Required reserves	34,335	34,360	-25
3.	(4-5)	Free reserves	36	-35	71
4.		Excess reserves	164	163	1
5.		Member bank borrowing	128	198	-70
6.	(1+5)	Total reserves	34,499	34,523	- 24
7.		Currency	80,952	80,989	-37
8.	(6+7)	Monetary base	115,451	115,512	-61

As can be seen from the table, actual nonborrowed reserves turned out to be within \$50 million of the "targeted" level. Banks held somewhat more free reserves than the staff had expected, almost entirely reflecting a lower level of borrowing than anticipated. On the other hand, actual required reserves were a little below expectations. This occurred because of more weakness than anticipated in the outstanding volume of banks' money market CD's.

^{1/} Includes week of August 18, which is partly estimated.

Total reserves were only slightly weaker than anticipated, but the monetary base was further below "target" because growth in currency was much smaller than expected.

NOTE: Government security dealer trading positions are on a commitment basis. Trading positions, which exclude Treasury securities financed by repurchase agreements maturing in 16 days or more, are indicators of dealer holdings available for sale over the near-term. Underwriting syndicate positions consist of issues still in syndicate, excluding trading positions. The basic reserve deficit is excess reserves less borrowing at Federal Reserve less net Federal funds purchases. Weekly data are daily averages for statement weeks, except for corporate and municipal issues in syndicate which are Friday figures.

*STRICTLY CONFIDENTIAL

**Monthly averages for excess reserves and borrowings are weighted averages of statement week figures.

NOTE: Weekly data for columns 1 to 4 are statement week averages of daily data. Columns 5 and 6 are 1-day Wednesday quotes (prior to 1976, figures shown are for 60-89 day and 90-119 day ranges, respectively). For columns 7 and 10, the weekly date is the mid-point of the calendar week over which data are averaged. Columns 8 and 9 are 1-day quotes for Friday and Thursday, respectively, following the end of the statement week. Column 11 gives FNMA auction data for the Monday preceding the end of the statement week. The FNMA auction yield is the average yield in bi-weekly auction for short-term forward commitments for Government underwritten mortgages. GNMA yields are average net yields to investors on mortgage-backed securities for immediate delivery, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the coupon rate 50 basis points below the current FHA/VA ceiling.
